

# Rainwater Harvesting!

*Saturday, Sept 14th, 10am — 12:30pm*

- In this class the residential homeowner learns about rainwater harvesting and how to cut the size of their utility bill.
- This is an introductory class on the basics of capturing rainwater, storing it, moving it, and using it.
- The speaker shares the evolutionary process he has learned over 30 years of designing and building his home system, how it started, and how well it is working today.

## The class:

- Covers common problems that may be encountered in developing a home system.
- Discusses interesting aspects on water itself. From an engineering standpoint, it's one of the more troublesome substances to understand and work with.
- Offers instructional materials with pictures on installation process.

*Taught by Neal Chism*
